

Upskilling a South African **Research Institute**

The Challenge

15 researchers needed to develop Artificial Intelligence capabilities, more specifically, the client was looking to get their team of researchers competent in Machine Learning & Computer Vision. This was Deviare's first major research and development organisation as a client.

The Solution

Through Deviare's Adaptive Learning Platform, a 3 month programme which included a combination of self-paced videos, live virtual classes and project submissions was created. Learners trained twice a week along with a project submission window of 7 days at the end of the training and reported on their progress to the team's senior researcher.

The Results

Candidates were successfully equipped with Artificial Intelligence capabilities. Our Adaptive Learning Platform effectively curated a personalised learning programme that generated an applied skill for the researchers.
